

## **Silver powder directional alignment agent KC2210**

Product Description: It is mainly used in additional metal powder coating. It can improve the metal powder coating of directional arrangement, wettability and looseness. It can promote the floating of gold, silver powder and pearlescent powder to the surface of powder layer, and make the silver float to the layer surface regularly and increase brightness and gloss for the surface, and reduce the amount of metal powder at the same time. Powder coatings suitable for epoxy systems.

1) Appearance: White Granular.

2) Recommended Use:

KC2210 is used in epoxy polyester system.

3) Usage: participate in extrusion, add metal powder after crushing.

The dosage is 0.5% - 1% of the total.

The above-recommended levels can be used for orientation.

Optimal levels are determined through a series of laboratory tests.

4) Storage:

Polyethylene lined kraft paper bags, net weight 25kg per bag. The packaging is sealed, stored in a cool and dry place, and the shelf life is at least 1 year.

Notes:

Avoid directly touch with skin and eyes; Wear protective clothing and goggles;

Wash with water after the operation.
